As this slate takes the same inclination We found aspecimen of Orthocera in the glazed argillite at the north end of Troy; but it was lent to the late Mr. Bogert of NewYork, and unfortunately lost, before we had the means of ascertaining the species. A species of Terebratula and Mytilus are found in the wacke division in the bed of the Champlain Canal, between Waterford and the Mohawk. Also the Nuttainia concntrica, an Orthocera, Trilobus, Encrinus, Pentacrinus, and some vegetable impressions. with the clay slate, and differs widely from the horizontal (or lst) graywacke; and as their meeting can never be ascertained, I have presumed to join them. Varieties. Chloritic. Both of the divisions are often coloured green by the chlorite in Rensselaer county. Roof Slate. That which splits freely into roofing slate, Hoosic, Chatham, N. Y. ,...
